

Tech Guide

HTV HD Billet Tensioner

- Harrop HD tensioner kit to suit VT-VZ running a Harrop HTV supercharger
- Replaces the stock tensioner and mounts directly to the RHS cylinder head using existing threaded holes
- Provides 240% greater load at operating extension compared to the stock tensioner, allowing for much greater belt control on high horsepower builds
- 40 degrees of tensioner rotation coupled with the ability to change the position of the anti-rotation bolt (at rear of tensioner), allows for a wide variety of supercharger drive ratios that the tensioner can accommodate
- Utilises a 65mm 8PK pulley to provide maximum belt clearance to the thermostat housing
- With a 0% overdrive crank pulley, the supercharger pulley/belt combos are:

Supercharger pulley diameter	Serpentine belt length
85mm	8PK2186
80mm	8PK2186
75mm	8PK2172
70mm	8PK2172
